

FlexNet Code Aware

Automate Your Open Source Risk Assessment

Benefits to You:

- Quickly scan and discover open source software and third-party packages in your build.
- Help developers expose and assess IP and vulnerability risks in applications.

You've heard the story many times before. Software had to be pulled from the market right before shipping because of a previously undiscovered software security vulnerability. Remember Heartbleed and Apache Struts2? Like all developers, you're most likely aware that hidden risks are on the rise, but that doesn't mean you're aware of where they're hidden, where you might be vulnerable, or what you're exposing users to.

Open Source Software: Increased Usage Brings Increased Complexity

Research shows that more than 50% of the code found in most commercial software packages shipped today is open source. But many software vendors are typically aware of less than 10% of the open source software they use in their products. You need a solution that can quickly and accurately discover and expose any risk from unmanaged open source use.

Figure 1: Perform fast, automated scans of your products.

FlexNet Code Aware

Designed for software developers, FlexNet Code Aware is an automated open source risk assessment and package discovery solution that enables you to quickly scan your products for security and intellectual property (IP) compliance risk.

FlexNet Code Aware can see what you can't in your open source code — from security threats to intellectual property (IP) compliance issues. It's a simple scan that ensures you're safe to ship... or stops you from spreading risk, in a matter of minutes. Best of all, it's free for developers like you — so you can focus on doing what you do best.

FlexNet Code Aware currently supports Java, NuGet and NPM packages. If you are looking for full language support, contact us for a demo of FlexNet Code Insight.

Highlights

Quickly Identify Open Source and Third Party Packages

FlexNet Code Aware will quickly identify the open source and third-party packages in your product.

Assess Your Level of Operational Risk

After you run your scan, you are quickly provided with leading operational risk indicators, prioritized by severity. This helps determine your organization's level of operational risk.

Minimum System Requirements

- Windows Platform: Windows 10, Windows Server 2012 R2, Windows Server 2016
- 4 GB RAM
- 5 GB Disk Space
- Java Runtime Environment (JRE) 1.8

Figure 2: Easy-to-use reports show operational risk plus security vulnerability and license exposure.

FlexNet Code Insight: A Complete Software Composition Analysis Platform

To further reduce your open source risk, expand FlexNet Code Aware’s scope of analysis to include all files in your applications. Flexera’s enterprise ready platform, **FlexNet Code Insight**, enables developer, legal and security teams to manage open source security and compliance needs across the company.

FlexNet Code Insight finds evidence of open source in software packages, commercial code, containers, multimedia files, binaries, dependencies, all the way to code snippets. The product supports 70+ language extensions and has the largest content library in the industry with more than 14 million components.

FlexNet Code Insight ships with plugins and REST APIs to enable your team to integrate security and compliance scanning into your build process, thus automating the scan and analysis of open source software. The platform continuously monitors your applications for any issues discovered in current or shipped applications.

About Flexera

Flexera is reimagining the way software is bought, sold, managed and secured. We view the software industry as a supply chain, and make the business of buying and selling software and technology asset data more profitable, secure, and effective. Our Monetization and Security solutions help software sellers transform their business models, grow recurring revenues and minimize open source risk. Our Vulnerability and Software Asset Management (SAM) solutions strip waste and unpredictability out of procuring software, helping companies buy only the software and cloud services they need, manage what they have, and reduce compliance and security risk. Powering these solutions and the entire software supply chain, Flexera has built the world’s largest and most comprehensive repository of market intelligence on technology assets. In business for 30+ years, our 1200+ employees are passionate about helping our 80,000+ customers generate millions in ROI every year. Visit us at www.flexera.com
